A corrigendum on

Antifungal evaluation of turmeric rhizome extract against *Colletotrichum capsici*, the causal agent of anthracnose on red-chili peppers (*Capsicum annuum* L.)

by Akin, HM, Aggraini D, Wibowo L, Prasetyo J & Suharjo R. 2024. *J. Trop Plant Pests Dis* 24(1): 75–81. <https://doi.org/10.23960/jhppt.12475-81>

In the original article, on page 77, the formula for disease intensity has an incomplete legend. The correct formula and its legend are shown below.

$$DI = \frac{\sum(n \times v)}{N \times V} \times 100\%$$

DI = Disease intensity (%);

Σ = Summation;

n = Number of samples in each score level of disease symptoms;

v = Score levels of disease symptoms;

N = Total number of samples examined;

V = The highest score levels of disease symptoms.

The authors apologize for this mistake and clarify that it does not affect the scientific conclusions of the article. The original version has been corrected
